Message from the Chairman

Aris Mulya Azof

Chairman

Indonesian Gas Society (IGS)/

Organizing Committee IndoGAS & Power 2023

While IndoGAS conferences provide a deep dive into the local Indonesian gas industry, they also look at international trends and are now considered to be the premier natural gas and LNG industry gatherings in the region.

IndoGAS & Power 2023 will be a landmark event that deals with strategic, regulatory, technical and commercial aspects of the gas business for industry leaders, legislators, experts and committed professionals that are regulating, developing, operating and financing Asia/Pacific natural gas, LNG and energy infrastructure.

The demand for natural gas continues to rise in Indonesia and its neighbors, against a backdrop of all the countries in the region striving to achieve security of energy supply. Amongst the challenges that the industry faces are how to improve the availability, deliverability and affordability of natural gas, upstream and downstream, and how to balance demand and supply through local production, exports and imports in order to achieve the best business outcomes for investors, the best prices for consumers and the best strategic outcomes for

the host country. For Indonesia, this critically includes a focus away from Java and Sumatra to other parts of the archipelago that need energy to support the development of smelters and power plant stimulate economic growth as well as provide social equity.

The development of gas industry as the energy transition is mandatory amid the Indonesia commitment for national for national determined contribution, (NDC) by 2030 & Net Zero Emmission by 2060.

The 10th International Indonesia Gas Conference will attract Government officials, global natural gas & power industry executives and professionals, service providers, technology developers and financial engineers to come together to discuss the roadmap to our energy future.

We look forward to welcoming you to IndoGAS & Power 2023 in the heart of the amazing City of Jakarta.

BUSINESS FORUM *Tuesday, 13 June 2023, 09:00 - 12:00 am*

“Unlocking the Potential of Indonesia’s New Working Areas: A Forum for Investor”

CONFERENCE TOPICS:

KEYNOTES

- A Look at the Future of Indonesia’s Gas and LNG Sector
- Global Outlook on Gas & LNG
- Creating a Balanced Fiscal Policy for Gas to Enable Sustainable Gas Monetization and Economic Development
- Opportunities and Challenges in Indonesia’s Gas Industry Development
- The Role of Gas/LNG in PLN’s Strategy for Net Zero Emission.

PANEL DISCUSSIONS

- Gas & LNG - Bridging Indonesia to a Sustainable Energy Future
- Expanding Indonesia’s Gas Infrastructure Development
- Expanding Use of Gas and LNG to Power
- Managing Global LNG Supply and Demand

The Indonesian government plans to offer 10 new oil and gas working areas this year to increase energy production and boost new discoveries. The government has recently introduced new policies to improve the terms and incentives for production sharing contracts, which offer greater opportunities for businesses and investors in the sector. The forum will discuss the potential opportunities and challenges in navigating the Indonesian oil and gas market, including regulatory and bureaucratic hurdles, pricing and project economics, and environmental concerns. The new production sharing contracts offer more favourable terms for investors, including a reduction in income tax, greater flexibility in exploration and production, and longer contract periods.

However, whether these incentives are sufficient to attract investors will depend on various factors, including the overall stability of the regulatory and political environment, the attractiveness of the oil and gas reserves, and access to markets. Indonesia’s promising new working areas in East Indonesia include several offshore blocks that have high potential for natural gas discoveries but also present geological, technological, infrastructure, and market challenges. Attracting more gas exploration and production companies to Indonesia will require a concerted effort by the government and the oil and gas industry to create a more attractive investment climate for the sector.

This forum is an indispensable opportunity for businesses and investors seeking to expand their operations in the Indonesian oil and gas market. Participants will gain valuable insights into the government’s perspective on the new production sharing contracts, engage in discussions on the implications of these policies for investors in the new working areas, and collaborate on developing a robust gas ecosystem to jointly tackle key challenges.

Exhibition

Tue - Wed, 13 - 14 June 2023

The IndoGAS & Power 2023 Exhibition will provide an unrivalled promotional vehicle for companies wishing to advertise or establish their position in the Indonesian and international gas markets. The event offers an exceptional opportunity to influence, show off to, and network with key industry decision makers and technicians from around the region.

IndoGAS & Power 2023 is expected to attract significantly more participants and visitors, and is being held at a time of greater urgency and sense of anticipation for the industry.

Who Should Attend?

This conference is for senior decision makers from across the sector: gas explorers and producers; gas/LNG buyers and traders; end users, including city gas companies, power developers and manufacturers; shippers and storers; financiers; legislators, regulators and government officials; technology experts; consultants; and academics.

Golf Tournament

Sunday, 11 June 2023
Palm Hill Golf Club, Sentul - Bogor

The IndoGAS & Power 2023 Golf Tournament presents an excellent opportunity to meet & get acquainted with the conference delegates prior to the commencement of the Conference.
